JOB OBJECTIVE

Procedural Programming, AI Programming, or other Game Programming role

QUALIFICATIONS

- Created procedural map builder in C# on own initiative for class, continued as side project
- Unity programming experience using C#, both in class and side projects
- Experience using C#, C++, Lua, UnrealScript, JavaScript, and Unreal Kismet
- Passion for learning and ability to rapidly acquire new skills independently
- Worked on own to develop Direct3D skills before taking classes on the subject
- Lifelong love of games starting with card and board games as a kid
- Drive to create – from D&D growing up to experimenting with DarkBASIC as an adult.
- Ability to work independently or as a member of a team
- Ability to maintain effectiveness in environments of high stress and high ambiguity

- Ten years of IT Helpdesk support
- Gut-level understanding of support, documentation and the needs of the end-user
- Thrive in a fast work tempo with the ability to balance timeliness and quality
- Strong written and verbal communication skills and the ability to apply business processes
- Experience working with end-users and external partners to support IT technologies
- Second contractor on my current team hired after a one year hiring freeze
- Second tech on my current team allowed to work from home 3 years ago

- Broad life experiences from growing up without electricity through 2 amateur MMA fights
- Detailed knowledge of military and world history and love of seeing the same in games
- Media geek – deep knowledge of TV and movies, but driven to make them obsolete
